

REMARKS

Reconsideration of the subject application as amended herein is respectfully requested.

The Applicant would like to thank the Examiner for granting the telephonic interview of October 19, 2004. As discussed at the interview, the parent application, issued as U.S. Patent No. 6,786,885, claimed an apparatus in which a liquid was ejected by an injection apparatus at an exit pressure and the apparatus included a controller that sensed an internal parameter used to determine said exit pressure, said controller generating commands to control said exit pressure. Moreover, the same patent also includes a method claim covering the steps of forcing said fluid from said reservoir through a fluid delivery system into the body tissue, said fluid having an exit pressure at an interface between said fluid delivery system and the body tissue; and automatically controlling the flow of said fluid to control said exit pressure. Independent claims 24, 25 and 26 have been amended to cover these aspects of the invention as well. Accordingly, it is respectfully submitted that the subject application is now in condition for allowance.

The Commissioner is hereby authorized to charge any fees that maybe involved with this response and request to Gottlieb, Rackman & Reisman USPTO Deposition Account 07-1730.

Respectfully submitted,

GOTTLIEB, RACKMAN & REISMAN, P.C.
